

QA TEST SUMMARY REPORT

EduPlan AI Study Planner

Abstract

This document summarizes the manual testing activities performed on the EduPlan AI Study Planner web application. It includes test execution results, defects identified, regression testing outcomes, and the final release recommendation.

QA Test Summary Report

Project Information

Project: EduPlan AI Study Planner

Application Type: Web Application

Tester: Alishba Rashid

Testing Type: Manual Testing

Testing Period: June 2026

1. Objective

The objective of this report is to summarize the overall testing activities, execution results, identified defects, regression testing outcomes, and the final quality assessment of the EduPlan AI Study Planner.

2. Testing Summary

Metric	Result
Total Test Cases	33
Executed Test Cases	33
Passed (Initial Execution)	27
Failed (Initial Execution)	6
Bugs Logged	6
Bugs Fixed	6
Regression Testing	Completed
Final Passed	33
Final Failed	0

3. Defect Summary

Severity	Count
High	3
Medium	3
Low	0

4. Testing Activities Performed

The following activities were completed during this project:

- Prepared the Test Plan.
- Designed 33 manual test cases.
- Executed all planned test cases.

- Reported six defects in Jira.
- Maintained a Defect Log.
- Verified reported defects after fixes were implemented.
- Performed complete regression testing.
- Confirmed successful execution of all test cases after bug fixes.

5. Overall Testing Outcome

During the initial testing cycle, six defects related to authentication, dashboard functionality, session management, and task display were identified and documented in Jira.

After the issues were resolved, the application underwent complete regression testing. All previously failed test cases passed successfully, and no critical defects remained. The application's core functionality performed as expected during the final verification.

6. Final Recommendation

Based on the completed manual testing activities, successful bug verification, and regression testing results, the EduPlan AI Study Planner meets the expected functional requirements and is considered ready for release.

7. Conclusion

This project demonstrates the complete Manual QA Testing lifecycle, including planning, test case design, test execution, defect reporting, defect tracking, bug verification, regression testing, and QA documentation using industry-standard tools such as Jira, GitHub, and Google Sheets.
